[pinsogna](#)

What are we talking about?

Let's start with a brief introduction.

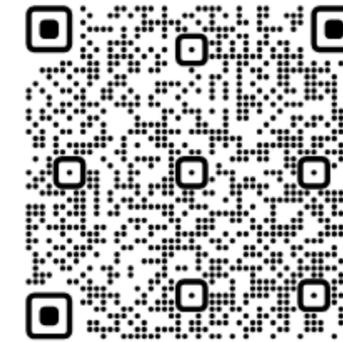

<https://talks.paoloinsogna.dev/bees>

The details lie in the documentation

AWS S3 PutObject REST API
[Documentation](#)

AWS Signature Version 4
[Calculations for the Authorization Header](#)

**Let's get to
the action!**

Setup

No dependencies in `package.json`, Node.js already has our backs ...

```
1  {
2    "name": "direct",
3    "version": "1.0.0",
4    "main": "index.js",
5    "type": "module",
6    "scripts": {},
7    "dependencies": {}
8  }
```

The skeleton

```
1  import { createHash, createHmac } from 'node:crypto'
2  import { readFile } from 'node:fs/promises'
3
4  const awsS3UnsignedPayload = 'UNSIGNED-PAYLOAD'
5
6  function sha256(contents) {
7    return createHash('sha256').update(contents).digest('hex')
8  }
9
10 function hmacSha256(key, contents) {
11   return createHmac('sha256', key).update(contents).digest()
12 }
13
14 // Implements the Authenticating Requests (AWS Signature Version 4) algorithm.
15 function signS3Upload(keyId, accessKey, region, method, rawUrl, headers, payloadHash) {
16   // CanonicalRequest calculation
17   // StringToSign calculation
18   // Signature calculation
19 }
```

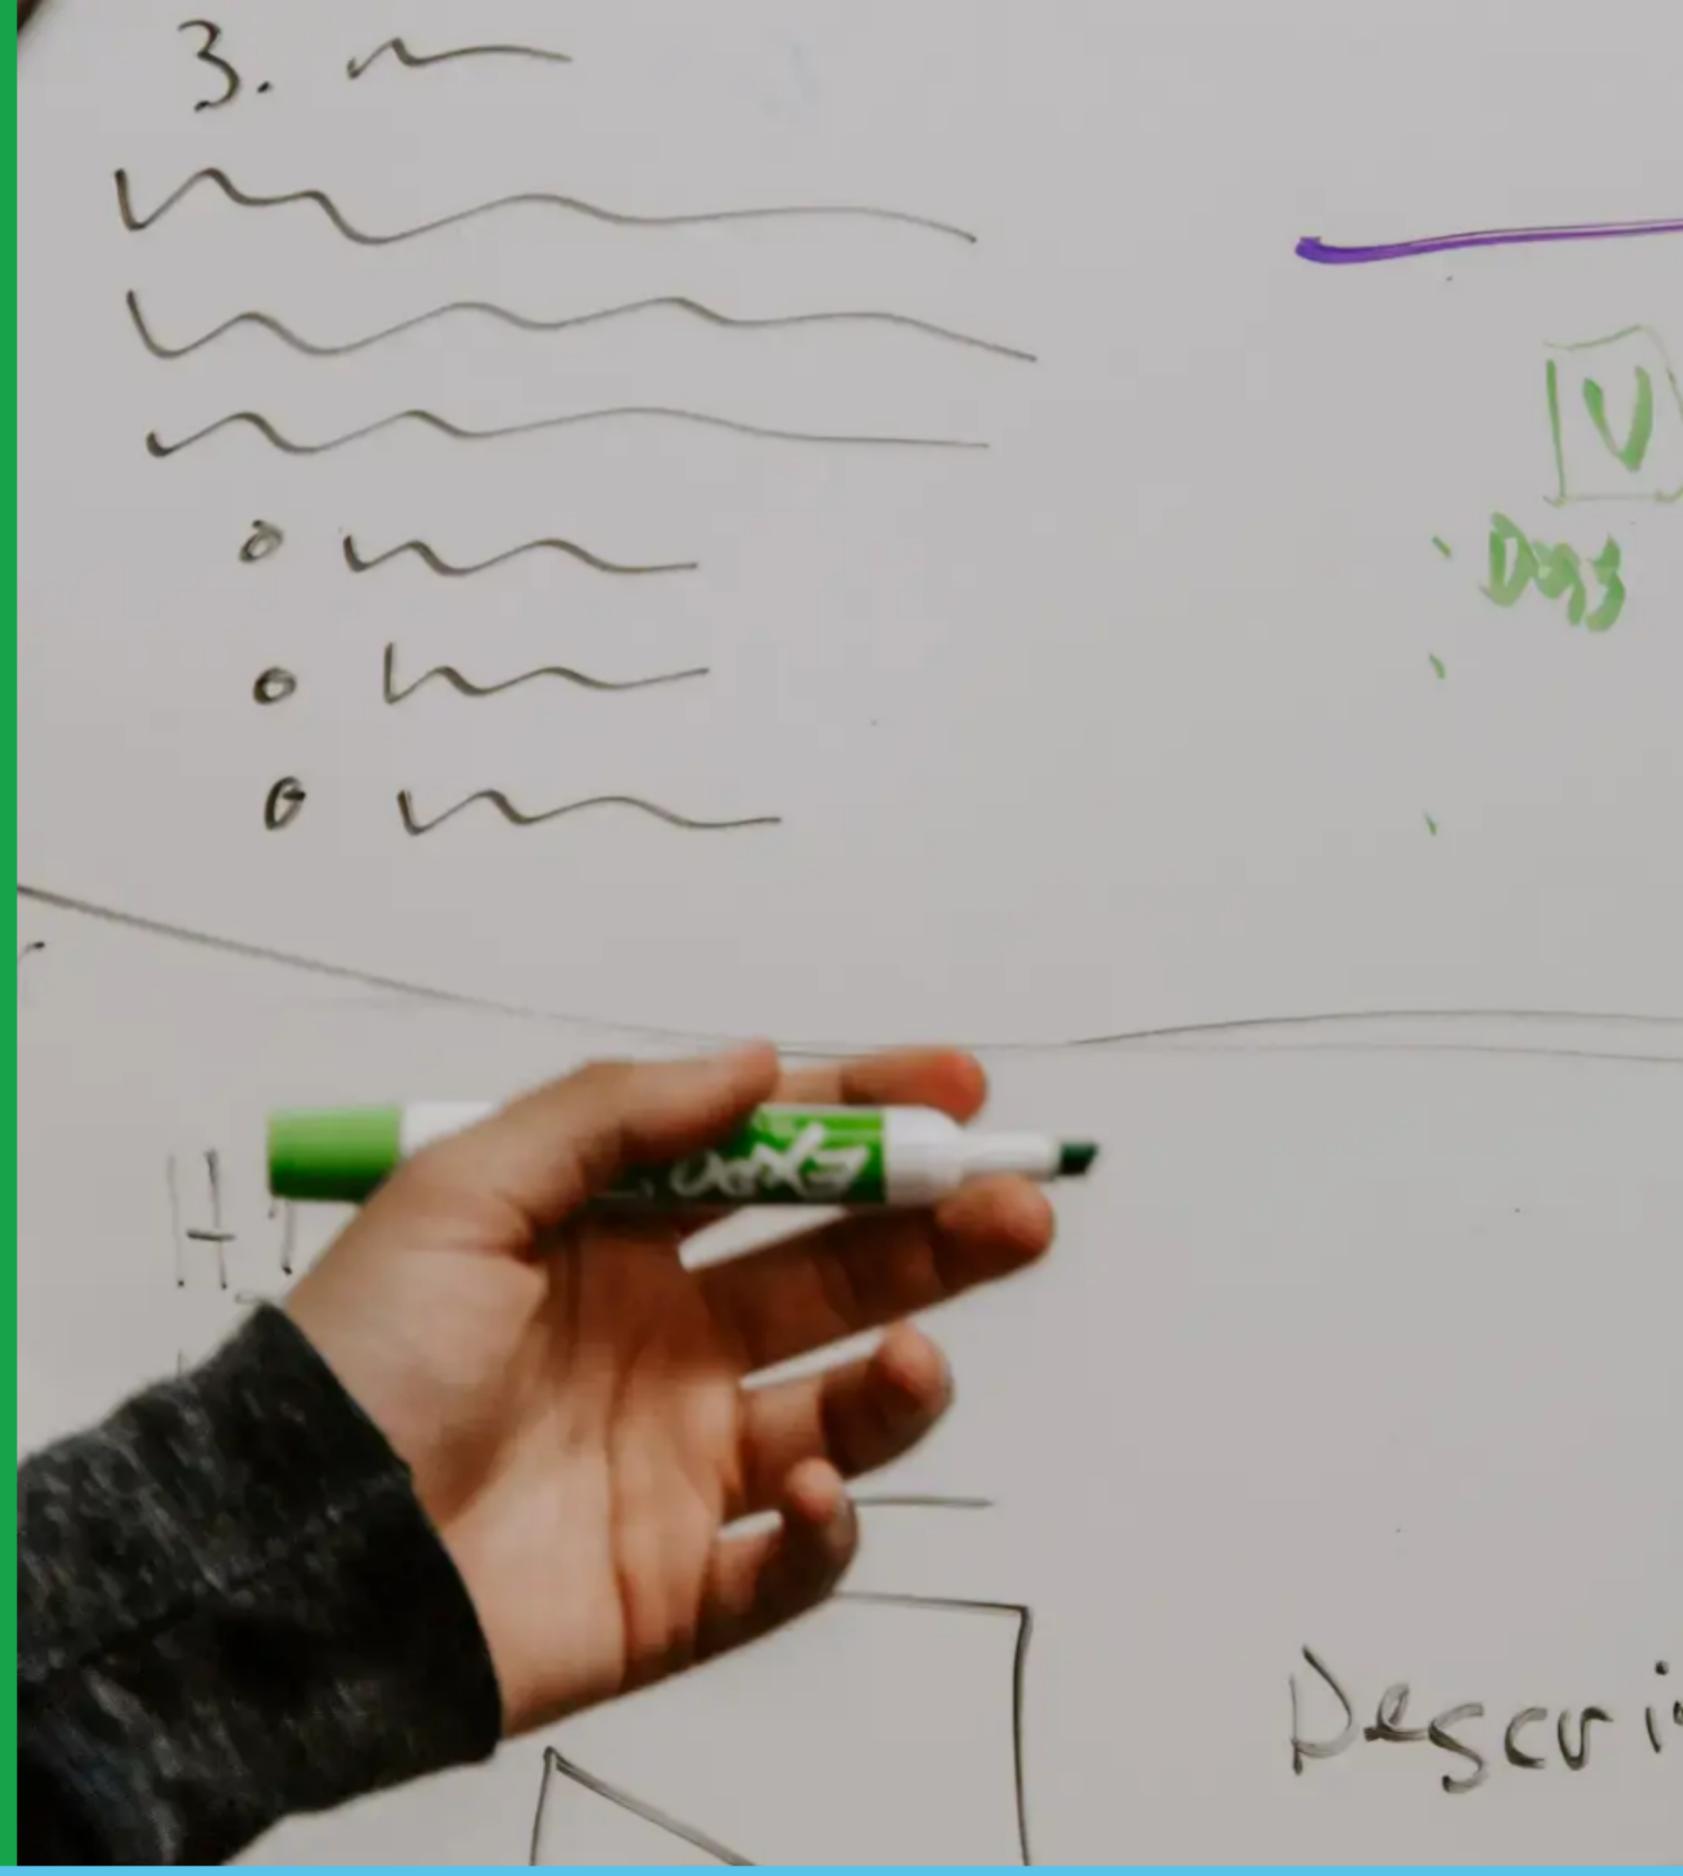

Task 1: Create a Canonical Request

Enjoy! 🤪

Task 2: Create a String to Sign

Enjoy! 😂

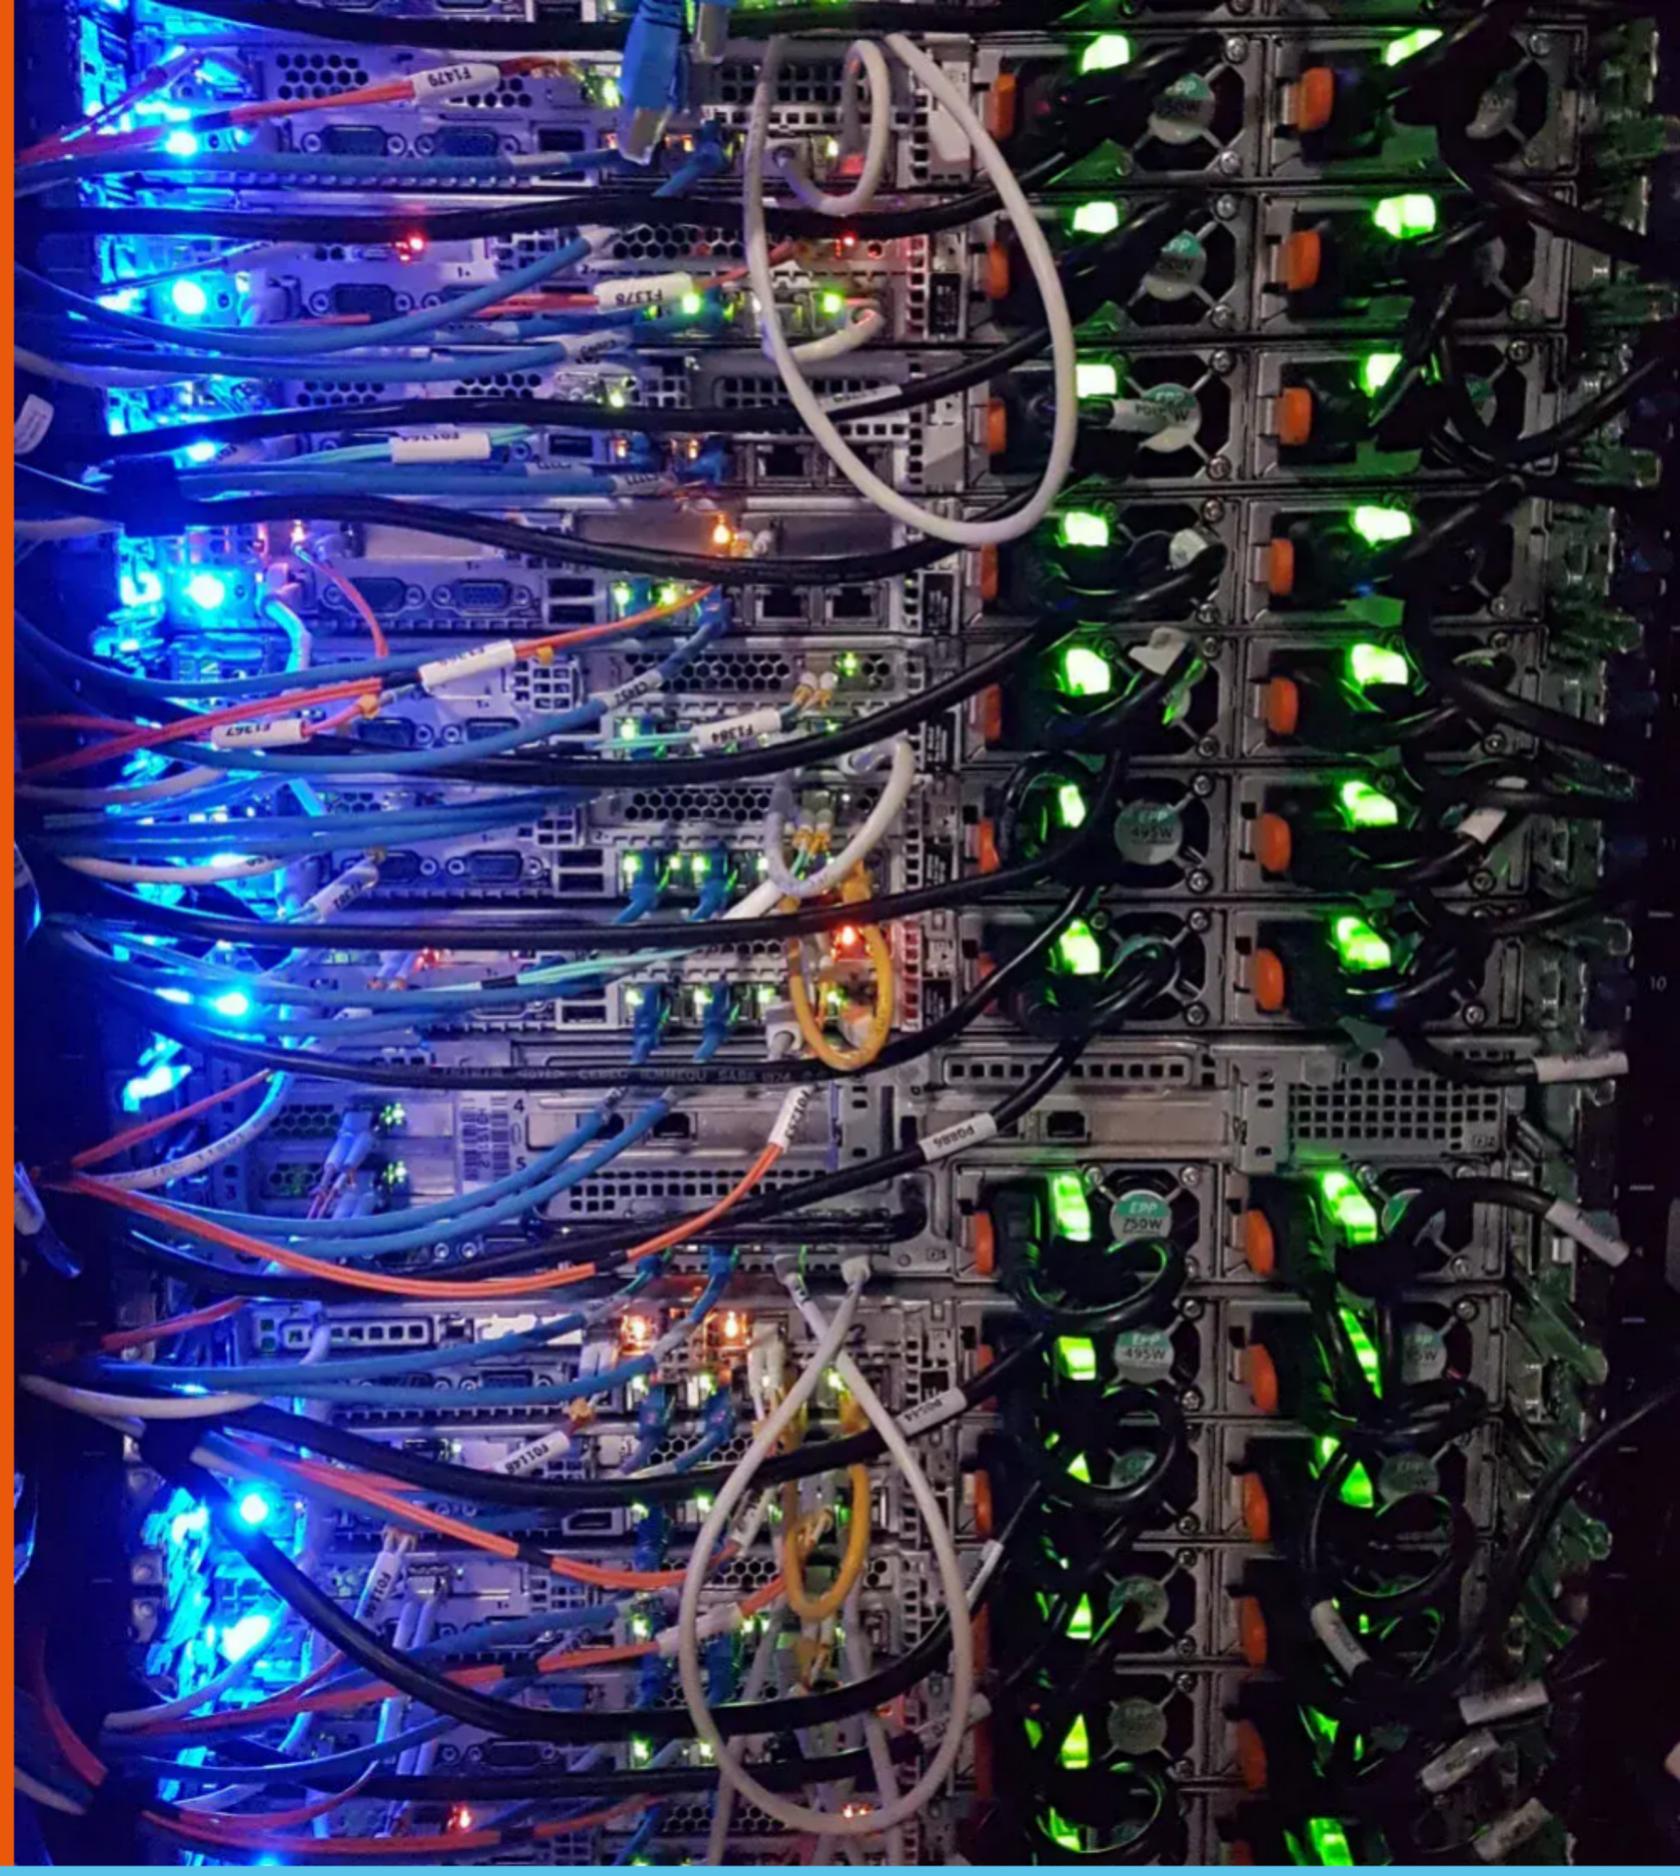

Task 3: Calculate Signature

Enjoy! 😊

Task 4: REST API call

Enjoy! 🧐

Task 5: Main function

Enjoy! 🍺

Take home

You can find all the code on GitHub:

<https://github.com/ShogunPanda/workshops-bees>

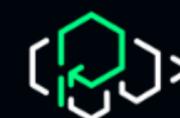

Thank you!
